

## Project Portfolio Management

Project portfolio management is the effective and efficient high-level oversight and administration of tasks that enables project managers and project management offices (PMOs) to analyze and collectively manage current or proposed projects. In this workshop, discover how organizations implement Modern Project Management by creating an enabling environment, and continually developing their competencies. Learn how to manage diverse project portfolios, engage stakeholders and improve overall project delivery.

### Learning Objectives

- Understand and know how to apply the concepts of Modern Project Management
- Discover how to create an enabling environment to improve project and service delivery
- Understand the difference between Managing Project Portfolio, Stakeholders and Capital Projects
- Understand the evolution of project management and its influence on modern day business
- Discover how to develop and leverage your skills in Project Management to benefit your team and organization

### This Training is Ideal for:

- Municipal employees, leaders and managers who lead or work on projects and are committed to realize their organizational goals by becoming project champions, project sponsors, project managers and/or project team members
- Individuals who are inclined to experience a deeper dive into project management as a core competency and enabling their organizations to achieve their goals by leveraging from Modern Project Management
