AMCTO Workshop Description: Change Management

How should we implement Change? It’s a simple enough question, surely there’s a simple answer -- especially since we get to do it so often. Every time we implement a new system or install a new process, we’re implementing Change. Surely there are some things that work, and some things that fail? Surely we’re intelligent enough to sift out the good from the bad? We need to understand the deep mystical secrets of Change Implementation.

About the Instructor - Peter de Jager is a keynote speaker/writer/consultant on the issues relating to managing change of all shapes and sizes in all types of organizations. He has published hundreds of articles internationally on topics ranging from Problem Solving, Creativity, and Change. He has written dozens of regular columns, most notably to municipal organizations in the Municipal World magazine.
